EDUCATION

Vellore Institute of Technology

B.Tech in Computer Science and Engineering, CGPA: 8.79

Oct 2022 – Aug 2026

Bhopal, MP, India

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript, SQL
Backend: Node.js, Express.js, REST APIs, JWT, Socket.IO
Frontend: React.js, Next.js, HTML5, CSS3, Material UI
Database: PostgreSQL, MongoDB, MySQL
Cloud & DevOps: AWS, Docker, CI/CD Pipelines, GitHub Actions, Redis, Postman
Version Control: Git, GitHub

EXPERIENCE

PearlThoughts

Mar 2026 – Aug 2026

Full-Stack Developer Intern

Remote

- Contributed **60+ commits** across **2 full-stack codebases**, developing a construction estimating and bid-management platform using TypeScript, Next.js, React, NestJS, PostgreSQL, and TypeORM.
- Implemented a monitoring dashboard tracking **4 runtime metrics**—API requests, errors, response latency, and Node.js memory—across a **rolling 30-minute window** divided into 60 data buckets.
- Enhanced the proposal workflow with **2 AI-powered APIs** for template recommendation and email improvement, supporting rich-text editing, dynamic placeholders, and PDF/Excel exports; validated delivery behavior against **13 automated test cases**.
- Extended weekly executive briefings with **5 new business metric areas**: YTD financials, project health, milestone variance, budget-versus-actual performance, and accounts receivable.
- Developed manual follow-up scheduling with weekend handling and **timezone-safe processing**, adding **3 database audit fields** to record whether, when, and by whom a date was overridden.

PROJECTS

ExecOS – Autonomous AI Email & Calendar Agent | [GitHub](#) | [Live](#)

Jan 2026 – Mar 2026

- Architected a **full-stack autonomous AI agent** using React.js (Next.js App Router), TypeScript, and PostgreSQL + Drizzle ORM, integrating **Gemini-2.5-flash-lite** to autonomously analyze emails, extract action items, draft replies, and schedule calendar events.
- Designed a **relational PostgreSQL schema** with **4 normalized tables** (users, integrations, tasks, agent_runs) using Drizzle ORM, hosted on Neon with type-safe query functions.
- Built and deployed **3+ serverless API routes** on Vercel (manual trigger + **15-minute cron automation**), gaining hands-on exposure to serverless architecture.
- Implemented **AES-256-GCM token encryption**, **OAuth 2.0** with automatic token refresh, and CSRF-protected auth flows for Gmail and Google Calendar APIs.

fast-jev-plus – LLM Context Compaction Plugin | [GitHub](#) | [Live](#)

Aug 2026 – Sept 2026

- Developed a **TypeScript Claude Code plugin** that prunes stale tool calls while keeping the remaining context verbatim, replacing lossy summaries, shipped across **18 PRs (6K+ lines)**.
- Built a deterministic offline scoring mode and a benchmark CLI over labelled cases, measuring a real trade-off: **52% context reduction** in model mode versus **100% critical-information retention** in local mode.
- Hardened the API path with **secret and PII redaction** (API keys, JWTs, private keys, emails, phones) on every outbound request, plus 30s request timeouts and sanitized errors, all verified by a **65-test Vitest** suite.
- Deployed a live metrics site on **Vercel and Supabase (PostgreSQL)** with token-authenticated ingestion, anonymous opt-out telemetry, rate limiting, and strict CSP headers.

CERTIFICATIONS

- AWS Cloud Practitioner - Ethnus Certified
- MongoDB DBA Associate - Ethnus Certified

EXTRACURRICULARS & ACHIEVEMENTS

- Solved **400+ DSA problems** on LeetCode and GeeksforGeeks using C++, demonstrating strong problem-solving and analytical thinking abilities.
- Shortlisted for **UST D3CODE 2025** interview round, competing among top national engineering teams.
- Mentored peers in DSA and backend development via **Microsoft Technical Club** workshops, operating in agile sprint structures and demonstrating cross-team collaboration.
